

MISSION SUCCESS STORY

Raymond P. was admitted to South Texas Health System Heart Hospital in McAllen, Texas mid-June due to lower extremity pain angiogram with thrombectomy and stenting. He improved with treatment and was transferred to Mission Nursing and Rehab early July.

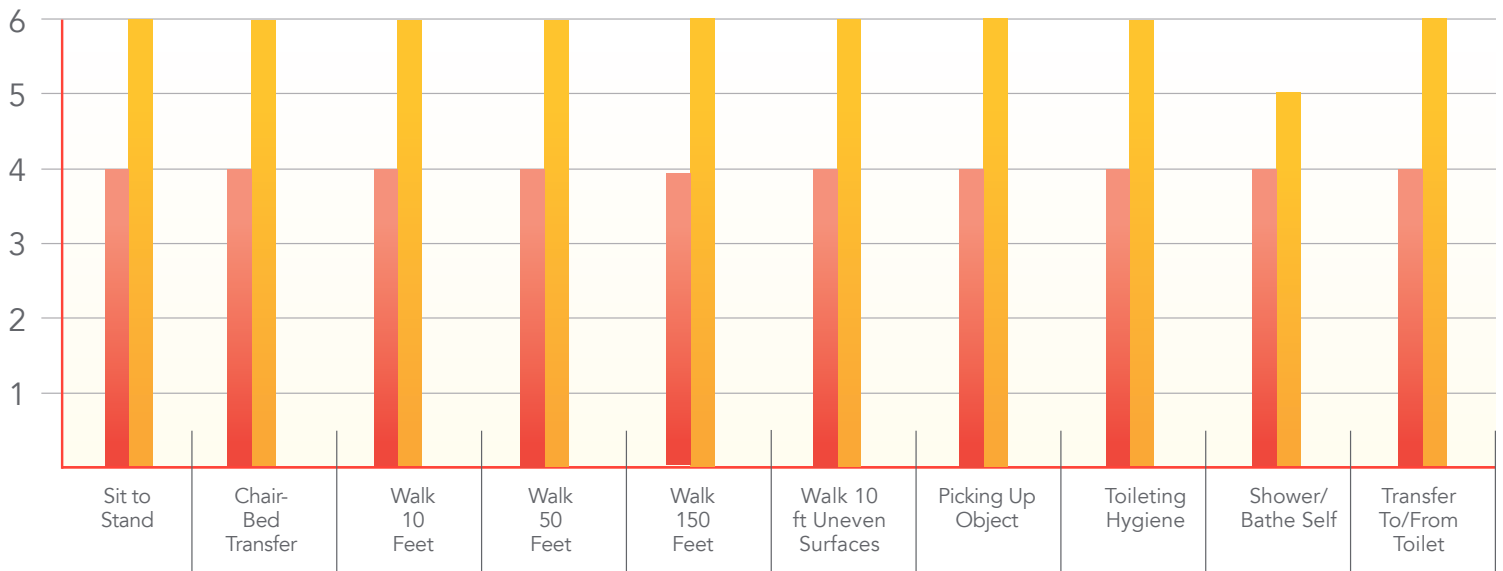

During Raymond's evaluation with our therapy teams, he reported 10 of 10 pain level. His initial assessments for physical and occupational therapy revealed impairments in strength, activity tolerance and balance affecting ADLs, bed mobility, transfers and ambulation. Our physical and occupational therapy teams created individualized plans of care for Raymond that focused on treating his impairments. After seven days of skilled rehabilitation, he demonstrated significant improvement with functional mobility, bed mobility, transfers, ambulation, and activities of daily living. And with the help of our nursing team, Raymond was no longer experiencing any pain!

Raymond was able to reach his goals and return home successfully on July 21 with supervision at an independent level for ADLs, ambulation, and functional mobility. **Great Job Raymond!**
