

MISSION NURSING AND REHABILITATION CENTER SUCCESS STORY

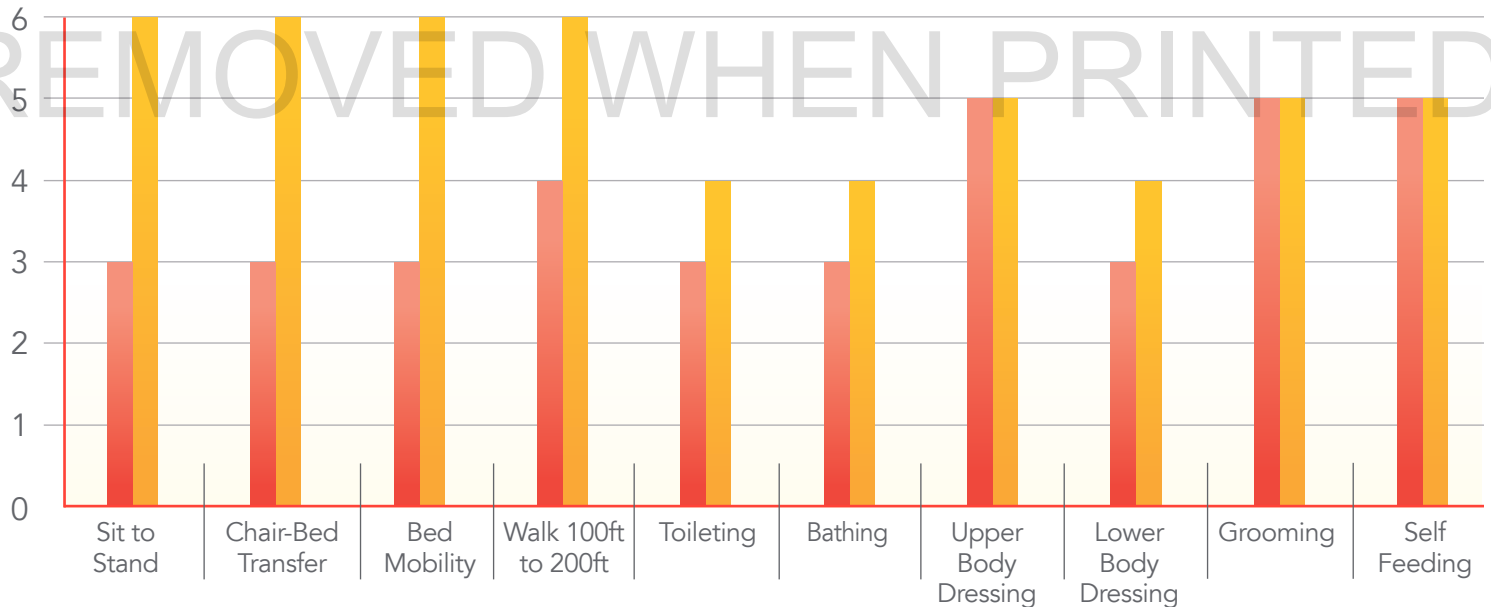

Apolonio O. was admitted to Mission Nursing and Rehabilitation Center following a hospitalization for encephalopathy and anemia resulting in decline in functional mobility, transfers and ambulation. He was evaluated by our therapy team which indicated impairments in BLE strength, balance, coordination, static/dynamic standing balance, fine motor skills, and activity tolerance, hindering his performance with functional transfers and ADLs.

Our experienced therapists created individualized plans of care that focused on treating Apolonio's specific impairments. After 17 days of skilled rehabilitation, he demonstrated significant improvement in BLE strength, coordination, balance, activity tolerance, safety awareness and cognitive communicative performance. He was able to reach his goals and successfully return home. **Great Job Apolonio!**

Apolonio's Therapy Outcomes
