

MISSION NURSING AND REHABILITATION CENTER SUCCESS STORY

Arnoldo G. was admitted to Mission Nursing and Rehab on April 24, 2025, for physical and occupational therapy following a hospitalization related to sepsis and a urinary tract infection. He experienced a decline in functional mobility, transfers, activities of daily living, and ambulation.

Upon admission, his physical therapy evaluation revealed impairments in bilateral lower extremity strength, activity tolerance, and balance, which impacted his ability to move in bed, transfer safely, and walk. He required standby assistance for bed mobility and transfers and was only able to ambulate 100 feet with contact guard assistance using a two-wheeled walker.

His occupational therapy evaluation showed deficits in balance, coordination, and stability, requiring maximum assistance with bathing, toileting, and lower body dressing tasks.

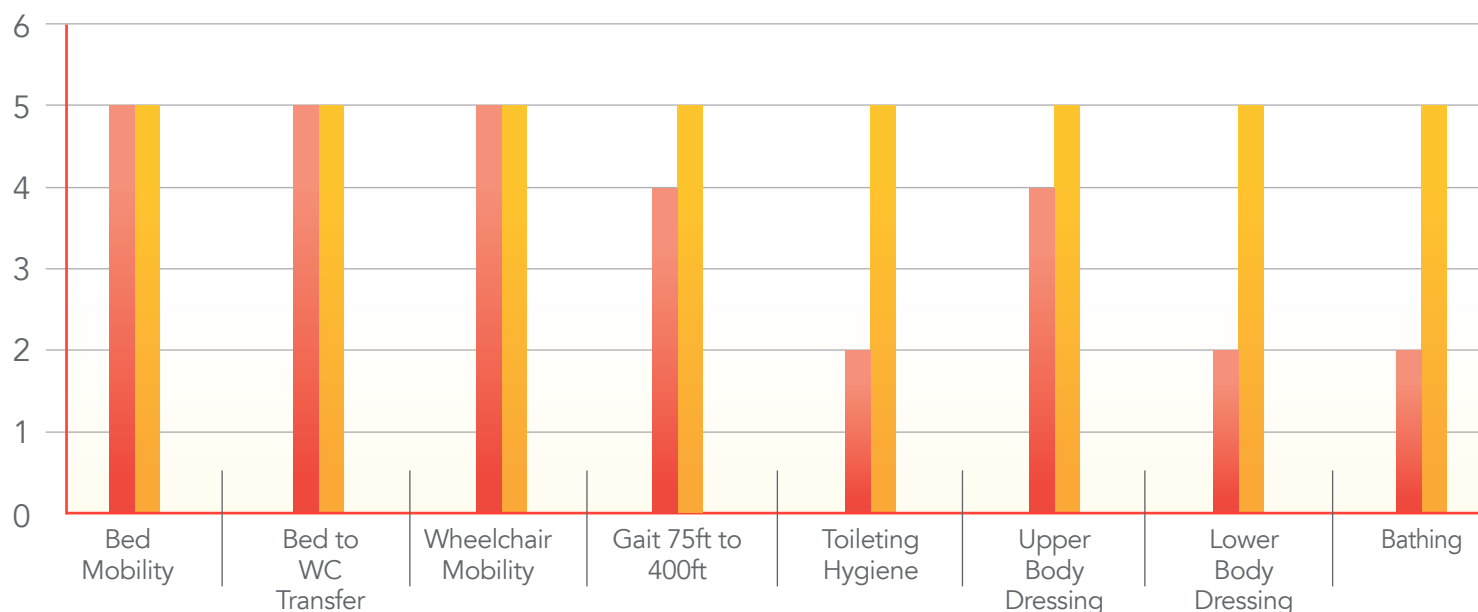

After a 35-day stay, which included IV therapy and skilled rehabilitation services, Arnoldo made tremendous progress. He was able to walk 300 feet with a two-wheeled walker under supervision and complete bathing and dressing tasks with supervision.

Arnoldo successfully discharged home to continue his recovery with home health therapy. We are proud of his strength, determination, and all that he accomplished during his stay at Mission Nursing and Rehab!
