

MISSION NURSING AND REHABILITATION CENTER SUCCESS STORY

Bertha G. was admitted to Mission Nursing and Rehab on May 16, 2025, following a hospitalization for viral pneumonitis and respiratory failure. Her goal was to improve her strength, coordination, and activity tolerance to reduce falls and regain independence with daily tasks and walking.

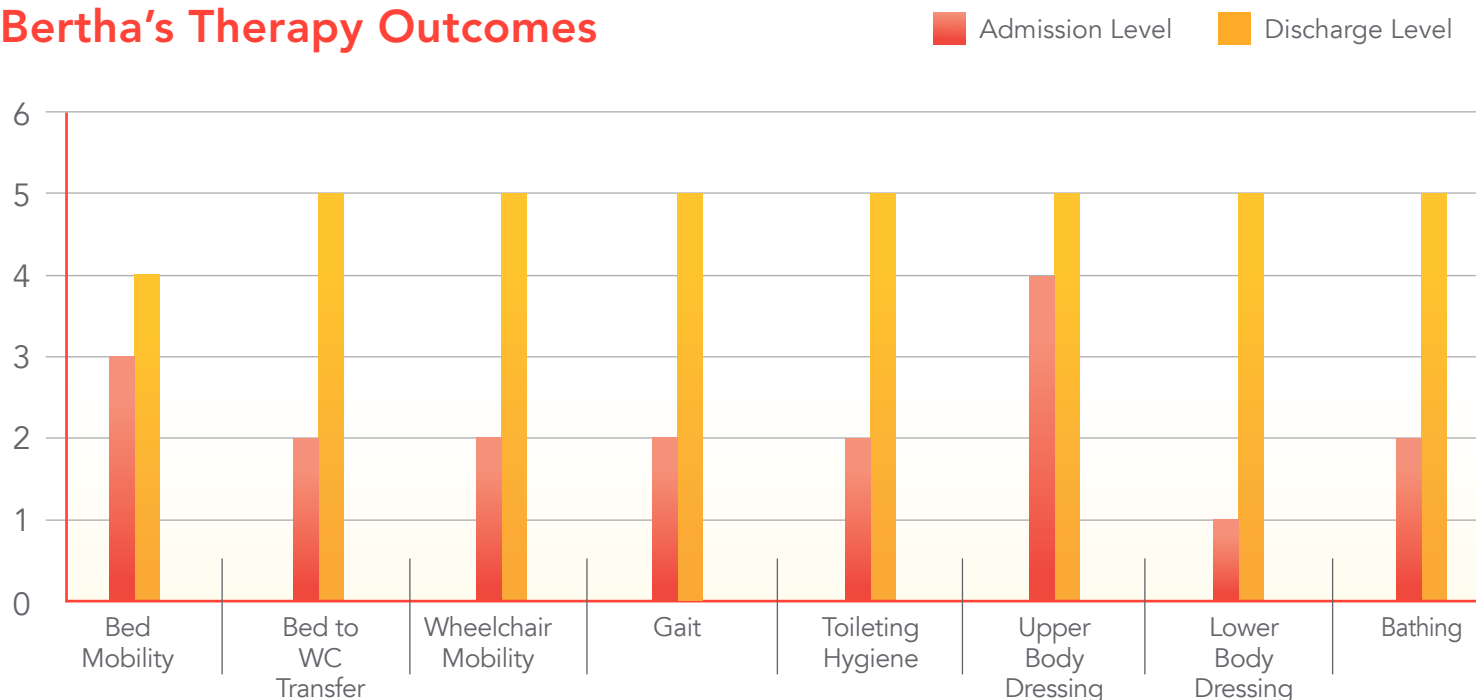

She was evaluated by our physical therapy team on May 18 and by occupational therapy on May 19. At that time, Bertha required moderate assistance with bed mobility and maximum assistance with transfers. She was only able to ambulate 5 feet. The occupational therapy evaluation indicated she needed maximum assistance with bathing and toileting tasks, and minimal assistance with upper body dressing.

After a focused 21-day rehab stay, Bertha made outstanding progress. She reached her goal of walking 200 feet with a two-wheeled walker and was able to bathe and dress with supervision.

Bertha was successfully discharged home to continue therapy through home health. We are proud of Bertha's strength, dedication, and the remarkable strides she made at Mission Nursing and Rehab!

Bertha's Therapy Outcomes
