

MISSION NURSING AND REHABILITATION CENTER SUCCESS STORY

San Juana D. was admitted to Mission Nursing and Rehab on February 22, 2025, to improve functional activity tolerance, increase lower extremity strength and range of motion, and enhance her independence with ADLs and gait.

Her initial therapy assessments indicated impairments in strength, balance, coordination, and endurance, which impacted her ability to perform bed mobility, transfers, and self-care tasks. At the time of her evaluations, San Juana required maximum assistance with bed mobility and transfers and was unable to ambulate. She was also dependent for toileting, lower body dressing, and bathing, and needed maximal assistance with upper body dressing.

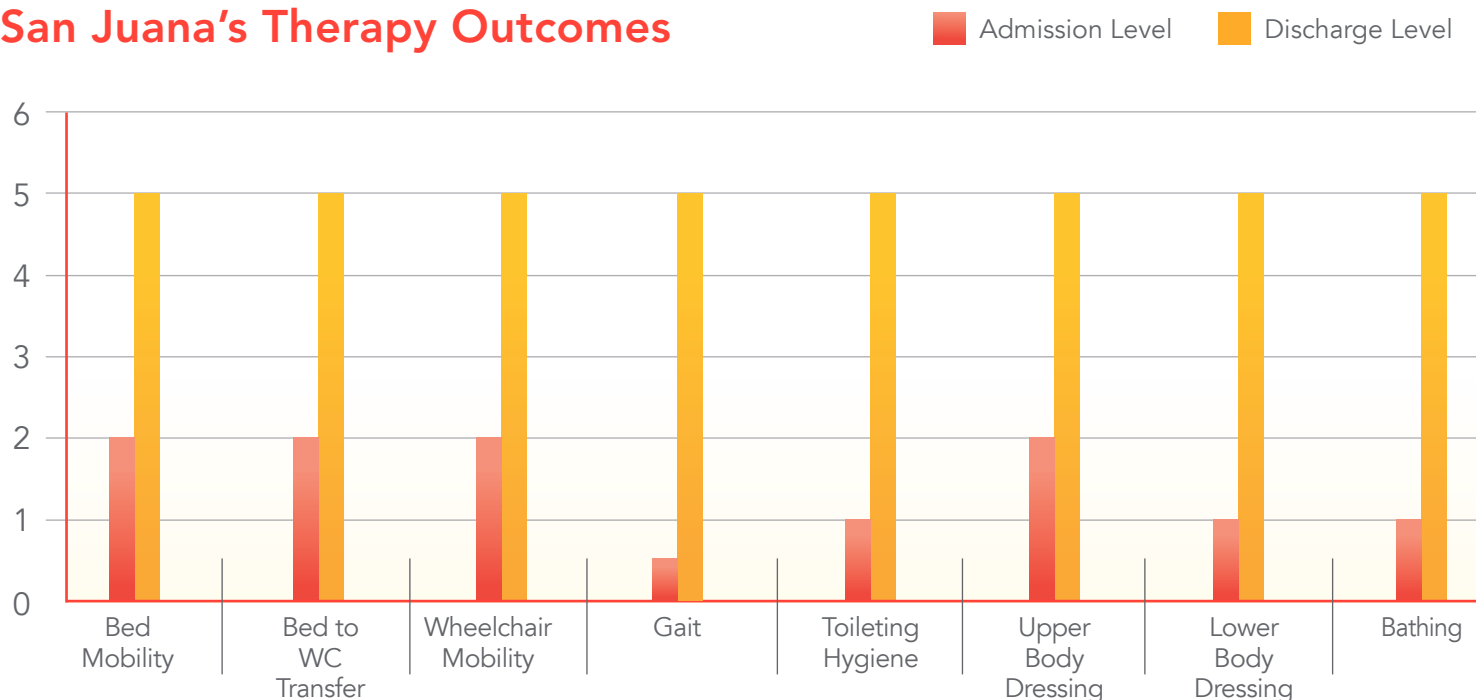

Following a 19-day stay, San Juana made remarkable progress by achieving her physical therapy goal of walking 200 ft with a two-wheel walker under supervision. She is now able to bathe and dress herself with supervision as well.

Strong and admirable, she was successfully discharged home to continue her recovery with home health therapy.

Congratulations, San Juana, on your rehabilitation success!
